performance notes

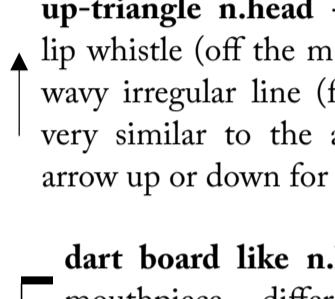

play accelerando with a few notes around the notated pitch including the latter itself and going a little further than its duration, accordingly to the cell's proportional position to the next beat.

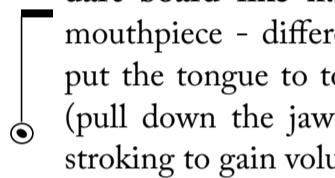

(*ppp-p*)
free dynamics variation between the two indicated dynamic marks (goes on as far as a crocheted line placed after it goes or until a new dynamic sign is placed on the score)

up-triangle n.head + irr. horiz. wavy line + textual disambiguation: short and rapid glissandi from a tone in the altissimo region of the instrument (you might want to use teeth on the reed to reach 'teeth tone' timbre quality)

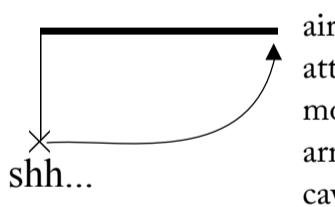

up-triangle n.head + textual disambiguation: lip whistle (off the m.piece); often followed by a wavy irregular line (for short gliss. in an effect very similar to the altissimo tone) or a curve arrow up or down for linear gliss. or bend.

dart board like n.head: snap tongue (off the mouthpiece - different from slap tongue effect); put the tongue to touch the palate and stroke it (pull down the jaw and open the mouth when stroking to gain volume).

rhythmicized lyrics: play the indicated effects (n.heads) while reciting the text; the rhythm is the "natural" rhythm of the text; slap-tongued and standard noteheaded syllables are to produce tones on the flute with the respective timbral result of the spoken syllable; three beams + lyric slur is for joint syllables; syllables without notehead are to be just spoken out (on or off the mouthpiece).

x-notehead + textual disambiguation: only air; airy white noise on or off the mouthpiece; pay attention to the phonemes indicated below as to module the effect; often followed by a curved arrow as to indicate variation on the mouth cavity tending the tone higher up or lower down in timbre.

Voice tone types:

whispering → almost whispering → normal voice → shout

Vibrato scale:

s/vib. → poco vib. → ord. → molto vib. → vib. esagerato

Air amount scale:

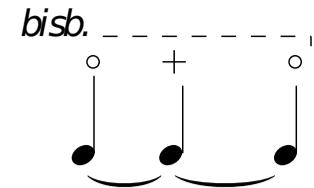

ord. → much air → mostly air → only air

Quarter-tones:

♭ ♯ ♫ ♭ ♮ ♯ ♪

play any multiphonic

bisb.
bisbigliando; use one or more fingerings to produce one same tone and vary between them as the cross and plus signs appear.

just irregular air/lip press. and/or vibrato.

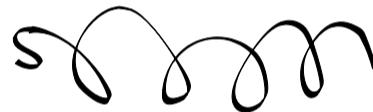

very irregular air/lip pressure and/or vibrato.

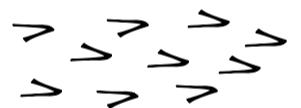

play any multiphonic with the notated note as fundamental or with fingerings based on that of the notated pitch

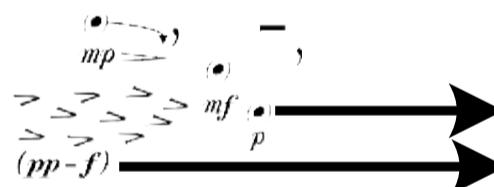

open hand n.head: strike a bunch of keys at the same time with the right or with the left hand; notehead up and down does mean left and right hand variation - which is which is not a mandatory issue (choose what is more organic and effective in each occurrence).

rounded 'sss' noise: sss sound off the mouthpiece; vary mouth cavity and lip tension to modulate sound circularly pretty much like a cicada/buzzer.

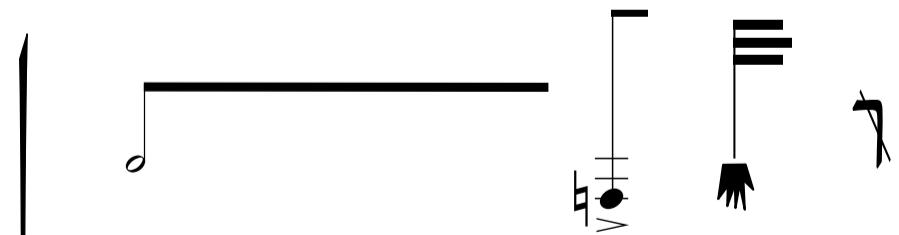

multiple and chaotic key clicks

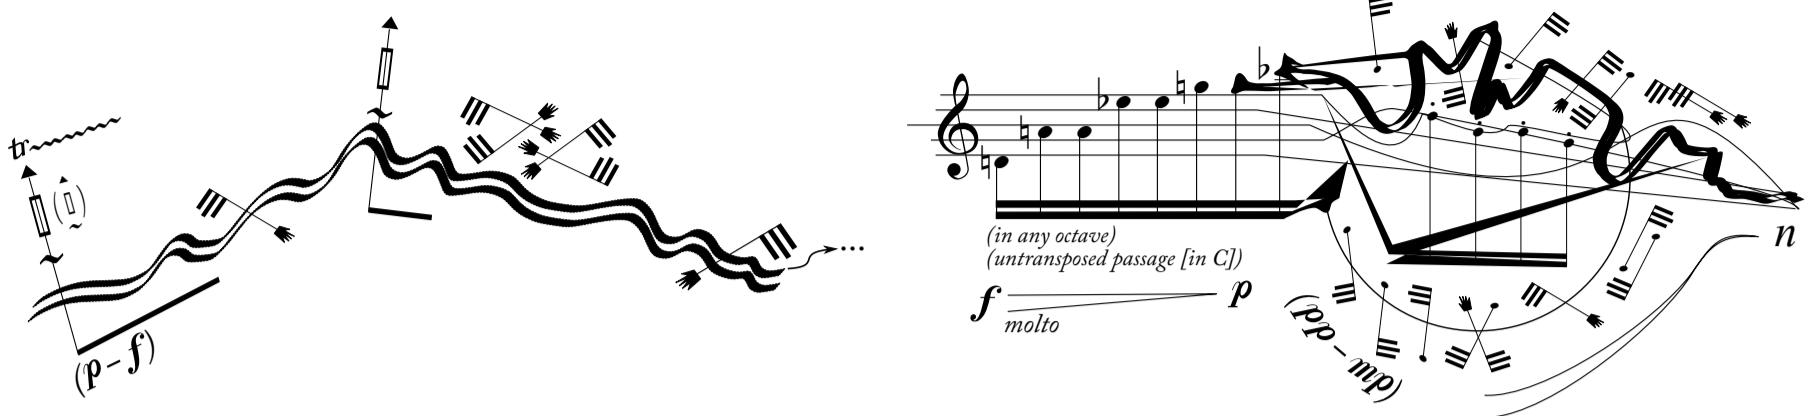

huge arrowed horizontal line: to repeat the indetermined last set of figures until the end of the arrow.

parenthesized little n.heads + k. clicks cloud: to blow while key clicking producing random inconstant, coy and irregular tones here and there (*much and mostly air only*)

plain straight flags: proportional/relative/spatial rhythmic notation; sounds are to be played according to their approximate position in the measure or block of seconds; beam-flag length tells the approximate duration of the sounds; three beamed notes are to very rapid attacks, pretty much like individual grace notes.
slashed seven rest: very short downbeat rest; used to make clearer the situations where indetermined rhythmic figures are on leftest of a new measure or measure's beat but are not supposed to be played on the downbeat, but a little bit after it.

improvisational graphic passages: free improvisation based on the graphics and drawings; sinuous lines may be interpreted as melodic, dynamic and/or even rhythmic contour; other signs on the way indicate effects and sounds which might be employed more or less at the place they appear on the line contour; tones shall be played only with *much* or *mostly airy* sound; the general result of most of these improvised graphic passages is to sound like beating wings, or perhaps beating cutted-off wings trying to fly desperately... the rhythmic intention of the interferences should reassemble a fowl's movements of the head and eyes: rapid, abrupt, ever-attent and robot-like (kind of... always straight, incisive and linear movements); in the case of the up-right example, the passage begins with normal playing of the noted pitches and rhythm, what becomes a complex, free and noisy improvisation around the upper G, in a dynamic range from *p**p* to *mp dim. al niente*, at the end.

note about the texts

ANGOLA

written in 2015 by P R Filho

dedicated to 2 guineafowls the author used to feed in his yard, named Tica and Teca
(from whom the cries that generated all the musical material of Angola were recorded)

Estou fraco:
Eu falo da força
de vetar saques
com quem seja ninguém

Da sede antes do lago
Do asco antes da coisa
Da água que é já fome
Ou daquilo puro-nojo...

Eu falo do salto (antes da asa)
de fazer fugirem saqués

A galinha de volta ao ovo
O bico de volta à casca
Do sujeito à mórula
Da angola ao grito:
Conquérm!

1. the texts are written in portuguese with eventual interferences of one sentence in french: " ne me demandez pas por quois!"

2. although it is of course to be read in the written language, the final intent is not to having a perfect pronunciation of the portuguese, but a texture-fitted and well integrated vocal sound - with just a little reasonably amount of understandability - if non-portuguese speaker musicians are supposed to play it.

3. the general character or mood desired for the recitation during performance of the piece is something more tended to the mystery, a mixture of deep tension and indifferent coldness... most of times it is supposed to sound as windy and rhythmic rapid whispers.

4. important is to emphasize the paradox: generally, the moments where a clear textual information is communicated to the audience are the also the moments of a more shaded and mysterious ambience and texture... the speech is always about to become pure sound, noisy attacks and blowings (sharp whisperings...); even when normal voice is required, you should emphasize the consonants exaggeratedly.
